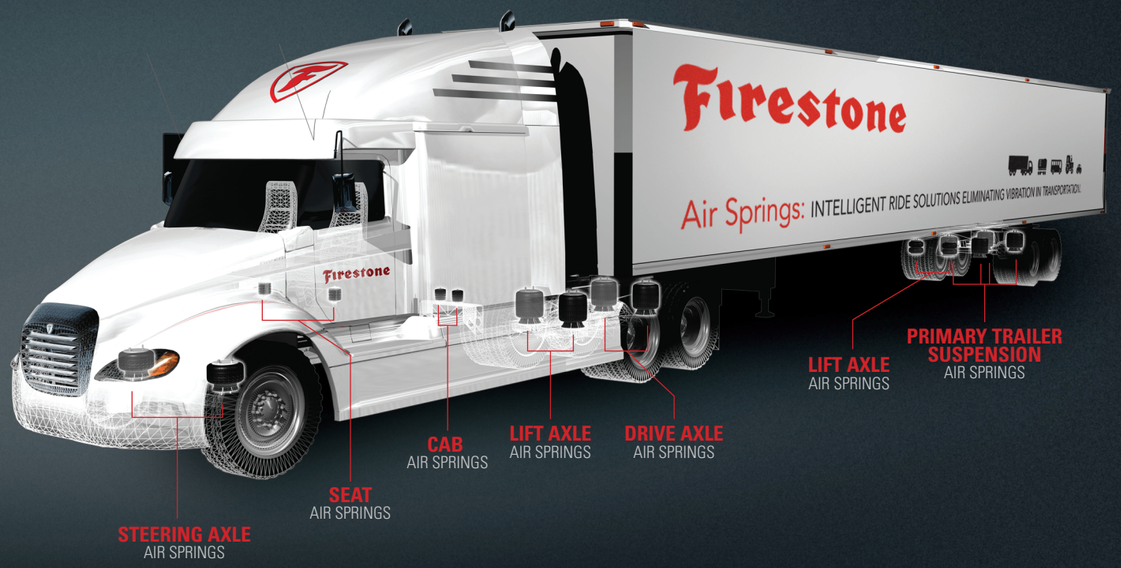
Firestone

AIR SPRING

REPLACEMENT GUIDE 2020

firestoneip.com 800-888-0650

THE COMPLETE SOLUTION FROM
THE ORIGINAL AIR SPRING



AIRIDE™ SPRINGS

Airide™ springs were pioneered by Firestone and perfected over the last 80 years. Given the wide adoption of Airide springs on practically all truck and trailer manufacturers, **only Firestone offers the complete replacement solution.**

WARRANTY AND MAINTENANCE

Warranty 270
Preventive Maintenance Checklist 273

WHEN EVERYTHING RIDES ON IT, TRUST FIRESTONE

For over 80 years, Firestone has been the trusted partner of commercial trucks and trailers around the globe. With our industry experience, as well as our international customer base, you can trust Firestone's quality, reliability, and service. **It's value for the long haul.**

QUALITY

While air springs may appear simple, they are actually a highly sophisticated and complex product. Firestone Airide springs are engineered to meet the strictest standards, no matter where you are located. Our extensive experience utilizing high-strength fabric and rubber compounds allows us to provide you with the confidence of a long-lasting, trouble-free air spring. To support this confidence, Airide springs are rigorously tested to OEM requirements, as well as our own. **It's an obsession with quality you can only expect from a leader.**

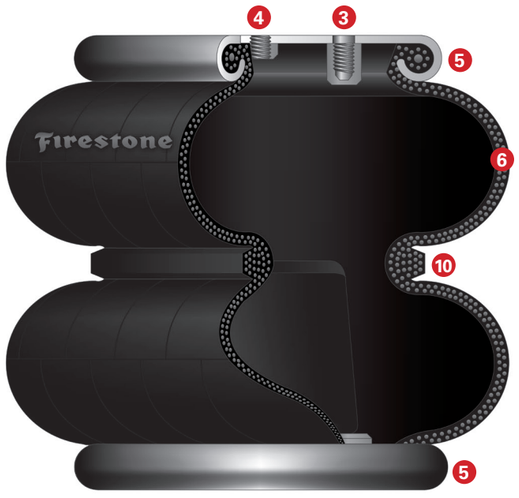
RELIABILITY

Firestone allows you to buy with confidence. We engineer and manufacture each product to provide years and thousands of miles of trouble-free service. OEMs trust Firestone's production and testing standards, which carries over into our aftermarket products. In fact, Firestone air springs often outlast other maintenance items on your suspension. With our industry-leading five-year warranty, we stand behind the durability and quality of our products. **Airide air springs will give you peace of mind on your journeys, no matter where they take you.**

SERVICE

We not only pride ourselves on high-quality products, but also our commitment to serving our customers and the industry. Therefore, we have the extensive service arm that goes along with our global manufacturing footprint. As an organization, we consistently strive to serve our customers and the market as best as possible. Our mission is to support distributors and end customers with training and product identification help, such as this application guide, as well as any other replacement needs. **You can rely on Firestone as your service partner.**

1T Reversible Sleeve Example



Double Convoluted Example

1. Stud
A permanent part of the bead plate assembly, used to attach the air spring to the suspension.

2. Combo Stud
Combination mounting stud and air fitting.

3. Blind Nut
A permanent part of the bead plate assembly, used to attach the air spring to the suspension.

4. Air Fitting Hole
A tapped hole that provides an air entrance for the part.

5. Bead Plate
Steel plate, permanently crimped to the bellows to form an airtight assembly.

6. Bellows
The air spring bellows is a flexible, airtight composite of rubber and reinforced fabric, which allows the assembly to roll up and down, providing an air-cushioned spring effect within the suspension.

7. Bumper (Optional)
A solid, molded rubber fail-safe device used on many suspension applications. Prevents excessive damage to vehicle and suspension in the case of sudden air pressure loss.

8. Piston
The lower section of the 1T and 1X style of air spring made from aluminum, steel, or fiber reinforced composite. Provides lower mounting arrangement for the air spring in the form of tapped holes or studs.

9. Piston Bolt
Attaches the piston to the bellows assembly. Extended on the bottom of the piston, in some cases, to serve as a means of attaching the spring to the suspension.

10. Girdle Hoop
A ring molded into the bellows of the convoluted type air spring.

Firestone

ASSEMBLY ORDER NUMBER & BELLOWS NUMBER

To identify an Airide spring for replacement, find the Assembly Order Number (AON) on the label adhered to the bead plate (e.g., W01-358-9082). This number is used for ordering purposes. Do not confuse this with the stamped 8-digit bead plate number. See page references below for detailed instructions on identifying your air spring.

For 1T and Convoluted springs, the bellows number is typically molded directly underneath the Firestone logo and tells exactly which bellows is needed.

1T spring samples:	Convoluted spring samples:
• 1T15M6 or 1T19L7 • 1T15 Series, C013582149	• 113, 20, or 312

This number will help narrow your choice of assemblies to just at few.

Start by identifying your style of air spring by comparing to the illustrations below. Then, go to the appropriate section of this guide or the cross references for more information on determining the corresponding order numbers.

FASTENER TIGHTENING SPECIFICATIONS		
Description	**Size**	**Torque (lb-ft)**
Bead ring nuts on bolts	5/16-24	17-22
Bead ring nuts on bolts	3/8-24	28-32
Bolts in blind nuts in bead plates	3/8-16	15-20
End of adapter studs in blind nut	3/8-16	15-20
Nut on end of adapter stud	1/2-13	25-30
Studs on bead plates or blind nuts	1/2-13 or 1/2-20 M12 x 1.75	25-30
Bolt to attach piston base to lower mounting surface	1/2-13	25-30
Nut on air entrance stud	3/4-16 M16 x 1.5 M20 x 1.5	40-45
Nut to an entrance stud	1 5/16-12UNF 1 1/4-12UNF	45-50
NPT air supply fitting	1/4 & up	17-22
Nut on end closure lower mounting	3/4-10	45-50

Operational Cautions

Air spring failure can be caused by a variety of situations, including internal or external rubbing, excessive heat, and overextension. For further details, refer to warranty section on page 270.

Temperature/Pressure Range

The ambient operating temperature range for standard vehicular air springs may vary. See the website for temperature ranges for individual parts by part number. The maximum pressure is 100 PSI.

Bumpers

In general, bumpers are used to support the vehicle weight to prevent damage to the flexible membrane during times when no air is in the system. They are also used as stops when the axle is raised by a lift unit. In applications that require frequent bumper contact, consult Firestone.

Downstops and Upstops

Positive stops in both directions (compression and extension) should always be used with Airide™ springs.

1. In **COMPRESSION**, the minimum height shown for each air spring is at, or slightly above the PINCH POINT of the bellows. Here is a #22 shown in the collapsed or "pinch point" condition:

   The bellows can be damaged if allowed to constantly bottom out as shown above; therefore, a downstop is required to prevent this. An external downstop can be something as simple as a steel block and should be sized at or slightly greater than the minimum height of the Airide spring. In our #22 example, the block would need to be at least 3.0 inches high. If an external downstop cannot be used, many parts are available with internal rubber bumpers.

2. In **EXTENSION**, an upstop is necessary to prevent the air spring from overextending. The reasons for this are two-fold:

   a) the life of the bellows may be reduced, and
   b) the crimp may open up, allowing the bellows bead to blow out of the metal end closure. There are many ways to design-in an upstop, including shocks, chain, a cable or strap, contacting a metal shop, etc.

Contaminates

Shielding should be used to protect the bellows from exposure to hot metal, sand, petroleum base fluids, acids, etc. Please consult Firestone if you wish to know how the bellows will withstand a specific contaminant. (For liquids such as acids, it is important to know both concentration and temperature.)

Storage

The best storage environment is a dark, dry area at normal room temperature.

Air Spring Alignment

Alignment is based on the orientation of the lower bead plate or piston compared to the upper bead plate. Alignments other than those shown are noted in the bottom view.

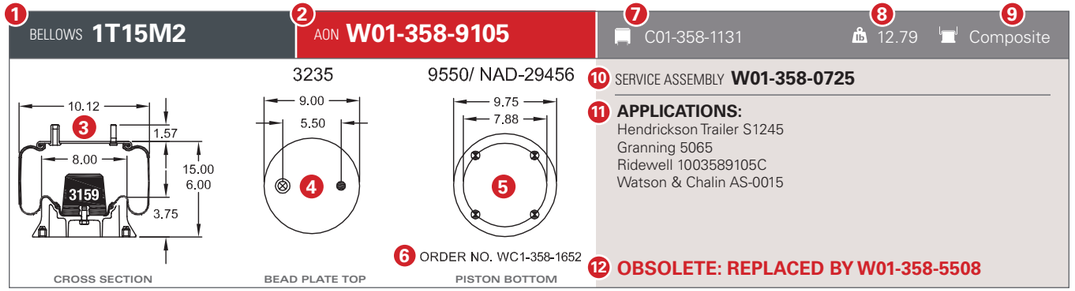
BEAD PLATE TOP VIEW	BEAD PLATE OR PISTON BOTTOM VIEW	
	PARALLEL ALIGNMENT	45° ALIGNMENT
						90° ALIGNMENT 
WARNING

DO NOT INFLATE ASSEMBLY WHEN IT IS UNRESTRICTED. ASSEMBLY MUST BE RESTRICTED BY SUSPENSION OR OTHER ADEQUATE STRUCTURE. DO NOT INFLATE BEYOND PRESSURES RECOMMENDED IN DESIGN LITERATURE (CONTACT FIRESTONE FOR INFORMATION). IMPROPER USE OR OVERINFLATION MAY CAUSE ASSEMBLY TO BURST, CAUSING PROPERTY DAMAGE OR SEVERE PERSONAL INJURY.

Firestone

The Firestone 1T or Reversible Sleeve type spring is the most popular style used on suspensions.

READING THE PARTS TABLE



1. Bellows Number
Identifies the bellows, normally molded directly underneath the Firestone logo.

2. Assembly Order Number (AON)
Located on the label adhered to the bead plate. This number is used for ordering purposes.

3. Cross Section View
Includes dimensional information in inches for **uninflated** diameter, maximum height, and collapsed height. A bumper, shown in black, and bumper drawing number is also referenced, if applicable (i.e., 3159).

4. Bead Plate Top View
Identifies dimensional information in inches, mounting attachments and the internal Firestone reference number for bead plate, stamped on bead plate top.

5. Piston Bottom View
Includes dimensional information in inches, mounting attachments and piston identification numbers.

6. Piston Component Order Number
The number used to order a replacement piston component, if applicable.

7. Bellows Component Number
If present, the C01-xxx-xxxx number identifies the Firestone internal bellows component, and can be referenced to specific AON applications.

8. Assembly Weight
Total weight of the assembly in pounds.

9. Piston Material
Aluminum, Steel, or Composite.

10. Assembly Components
Part numbers for sub-components associated with the assembly.

11. Applications
Vehicle and suspension manufacturers' part numbers for the particular Airide spring.

12. Assembly Notes
Important information if an assembly has been obsoleted and if there is an exact replacement part available, or if it has replaced other parts.

Firestone

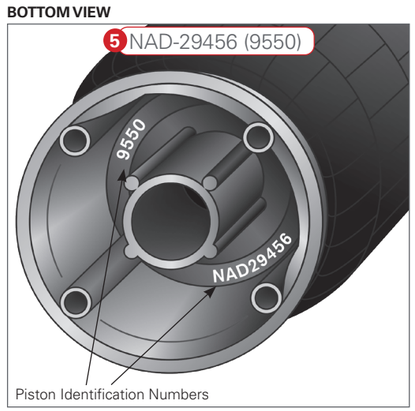
AIR SPRING IDENTIFICATION

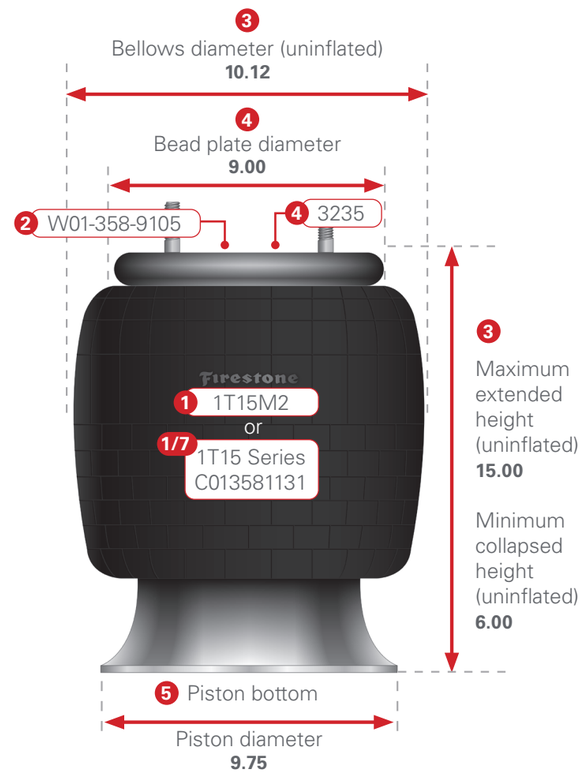
Assembly Order Number (AON) 2
The quickest way to identify the air spring is to read the manufacturer or Firestone assembly order number on the label adhered to the bead plate. Do not confuse this with the stamped 8-digit bead plate number.

Bellows Number 1 / 7
If the AON is illegible, read the part number molded on the bellows, normally directly under the Firestone name. The bellows could be identified in two ways; 1) with the "1T15M2" call out, or 2) with a "1T15 Series" call out and a "C01" number identification (e.g. "C013581131"), which would narrow your search to a smaller group of AONs. Then, use the bead plate and piston combination to determine the final AON.

Bead Plate 4
Identify the 8-digit stamped bead plate number. Reference the last 4 digits to find a match. If the number is not legible, use the **bead plate diameter** measurement in this view to further distinguish between assemblies. In addition, verify the alignment of mounting attachments.

Piston Bottom View 5
Compare the **piston identification numbers**, molded inside the piston, to those shown in the "Piston Bottom View" to find a match. You may also reference the piston indexes on pages 220 and 234 to narrow your search.





Measure and Reference Cross Section View 3
Should the bellows number be unreadable, the type can still be determined by measuring the **bellows diameter (uninflated)** and comparing this with the 1T styles in the Bellows Index by Size (page 216) until you find a match for the possible bellows. Then, measure the **maximum extended height,** as shown, and compare this with the "Cross Section View" of the parts tables for the general style of possible bellows (1T14, 1T15, 1T17, etc.). To determine if an **internal bumper** is present, measure the minimum collapsed height and compare it to the parts table.

NOTES

Firestone

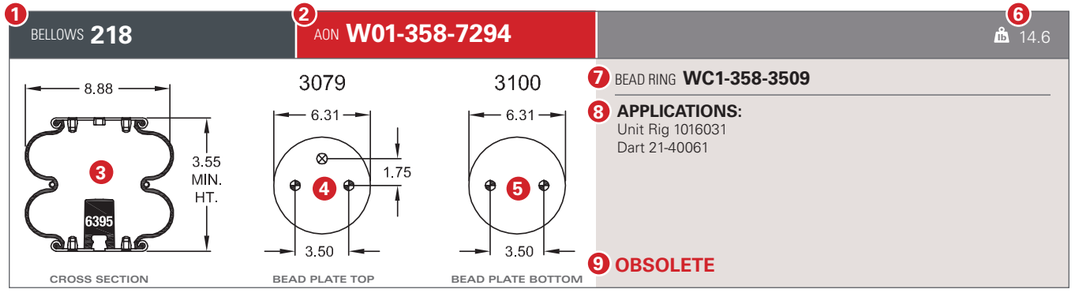
Firestone's convoluted Airide springs are available in three styles–single, double, or triple convoluted.

READING THE PARTS TABLE



1. Bellows Number
Identifies the bellows, normally molded directly underneath the Firestone logo.

2. Assembly Order Number (AON)
Located on the label adhered to the bead plate. This number is used for ordering purposes.

3. Cross Section View
Includes dimensional information in inches for **uninflated** diameter and collapsed height, as well as hardware details. A bumper, shown in black, and bumper drawing number is also referenced, if applicable (i.e., 6395).

4. Bead Plate Top View
Identifies dimensional information in inches, mounting attachments, and the internal Firestone reference number for bead plate, stamped on bead plate top.

5. Bead Plate Bottom View
Identifies dimensional information in inches, mounting attachments, and the internal Firestone reference number for bead plate, stamped on bead plate bottom.

6. Assembly Weight
Total weight of the assembly in pounds.

7. Assembly Components
Part numbers for sub-components associated with the assembly.

8. Applications
Vehicle and suspension manufacturers' part numbers for the particular Airide spring.

9. Assembly Notes
Important information if an assembly has been obsoleted and if there is an exact replacement part available, or if it has replaced other parts.

Firestone

AIR SPRING IDENTIFICATION

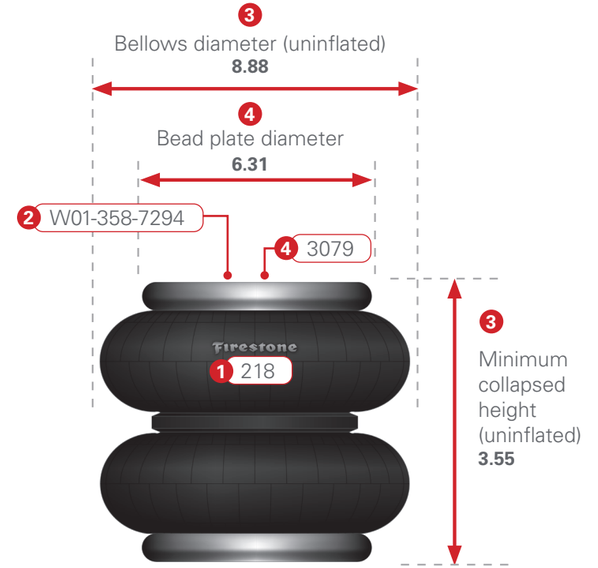
Convoluted Air Springs
To identify the exact style and part number to replace your current air spring, you need to identify the type of bellows, bead plates, and attaching hardware used, as well as determining whether the spring has an internal bumper. The steps below apply to all convoluted air spring styles (single, double, or triple).

Assembly Order Number (AON) 2
The quickest way to identify the air spring is to read the manufacturer or Firestone assembly order number, located on the label adhered to the bead plate.

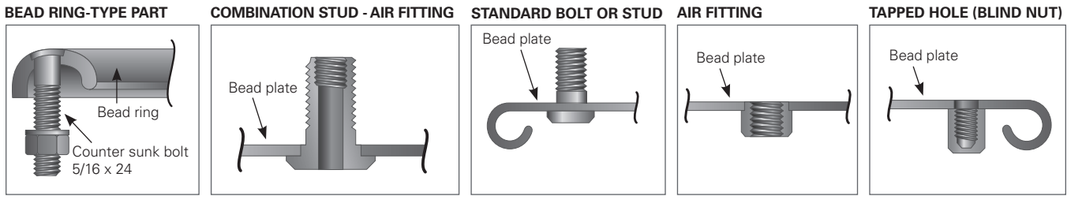
Bellows Number 1
If the AON is illegible, read the part number molded on the bellows, normally directly under the Firestone name. If the number (20, 22, etc.) is present, refer to the corresponding bellows range in this guide to narrow down your search.

Bead Plate 4
Identify the 8-digit stamped bead plate number. Reference the last 4 digits to find possible matches. If the number is not legible, use the **bead plate diameter** measurement in this view to further distinguish between assemblies. Verify the alignment of mounting attachments.

Air Spring Hardware 3
To complete the parts identification, compare the metal bead plates and attaching hardware with the assemblies detailed in that same section of the guide. See illustrations below.



Measure and Reference Cross Section View 3
Should the bellows number be unreadable, you can determine the bellows type with two simple measurements. Open the air entrance and allow the bellows to assume its normal shape. Then, **measure the bead plate diameter** and **outer diameter of the bellows**. Compare these diameters with those listed in the bellows index (page 216) for the specific type of convoluted (single, double, or triple) bellows that you have. To determine if an **internal bumper** is present, measure the minimum collapsed height and compare it to the parts table.



Firestone

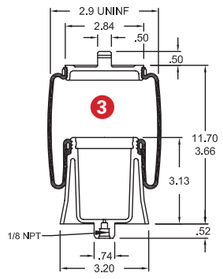
Sleeve style air springs are used for cab and seating applications, creating a smooth, comfortable ride.

READING THE PARTS TABLE

1 LOGO ORANGE	2 AON W02-358-7058	7 1.30	8 Composite



4 **CAP ID NO.** NBD-10409 (7042)

5 **PISTON ID NO.** NBD-12708 (6896)

6 BCR 9.00

9 **APPLICATIONS:**
NATIONAL SEATING 324662-01
(W02-N19-7058)

10 **OBSOLETE**

1. Logo Color
The Airide spring shield color indicates a very specific construction of the bellows, which helps with the identification process of the air spring.

2. Assembly Order Number (AON)
This number identifies the specific Firestone assembly order number that needs to be used for ordering purposes. It is important that the complete order number is used to avoid any confusion, especially with any type of electronic ordering. The complete order number in this example is W02-358-7058.

3. Cross Section View
Includes dimensional information in inches for **uninflated** diameter, maximum height, and collapsed height, as well as component dimensions.

4. Cap Identification Number
The drawing number is molded into most caps, followed by a 4 digit number in parentheses identifying the internal cap component number. Do not confuse this code with the AON.

5. Piston Identification Number
The piston identification number is molded into most pistons, followed by a 4 digit number in parentheses identifying the internal piston component number. Do not confuse this code with the AON.

6. BCR
This dimension is the measurement taken between the two metal rings on each end of the assembly. Note: BCR measurement will be somewhat shorter than specified in this guide.

7. Weight
The total weight of the spring assembly.

8. Piston Material
Aluminum, Steel, or Composite.

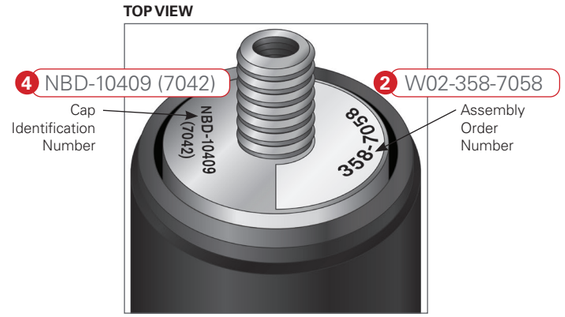
9. Applications
Includes all the information that is known about this specific application (i.e., model number, years of manufacture, part numbers, Firestone reference numbers, and competitor numbers, if known).

10. Assembly Notes
Important information if an assembly has been obsoleted and if there is an exact replacement part available, or if it has replaced other parts.

Firestone

AIR SPRING IDENTIFICATION

Assembly Order Number (AON) 2
The quickest way to identify the air spring is to read the manufacturer or Firestone assembly order number (AON) on the label adhered to the cap. The complete order number must include the W02 number at the beginning. Use the following pages to find the correct number for your air spring. The complete AON in the diagram is W02-358-7058.



Logo Color 1
The parts tables are sorted by the air spring logo color. If the AON number is not legible, identify the Airide spring shield color to narrow down your search. From there, follow the steps below to identify your air spring.

Cap Identification Number 4
The cap can be used for further part identification in the parts diagrams by matching the drawing number (e.g. NBD-10409) or the cap component number (7042). In addition, the crimp (metal) ring around the cap has a code stamped into it. The last 4 digits of the seven-number string at the beginning of the code reference the cap identification number.

Piston Identification Number 5
The piston drawing (NBD-12708) or internal piston component number (6896) molded into the piston can also be used to narrow down the search for the correct replacement part.

BCR 6
If an additional identifier is needed, measure the distance between the two metal rings – one holding the cap in place and the other holding the bellows on the piston. This measurement is called the BCR, and is identified in the parts diagrams.

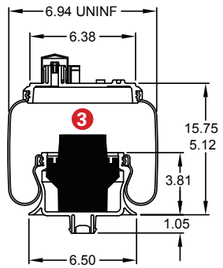
NOTES

Firestone

Steering axle air springs improve handling and stability, reduce wear and fatigue on other components, and enhance ride comfort. Available exclusively from Firestone.

READING THE PARTS TABLE

1 CAP COLOR **BLUE**	2 AON **W26-358-9913**	6 12.79 lb	7 Composite



4 **CAP ID NO.** NAD-30942 (6713)

5 **PISTON ID NO.** NAD-31336 (6888)

8 **APPLICATIONS:**
HENDRICKSON TRUCK 60750-2
VOLVO / MACK

1. Cap Color
Color of material used on assembly cap.

2. Assembly Order Number (AON)
Located on the label adhered to the assembly cap. This number is used for ordering purposes. It is important that the complete order number is used to avoid any confusion, especially with any type of electronic ordering. The complete order number in this example is W26-358-9913.

3. Cross Section View
Includes dimensional information in inches for **uninflated** diameter and height, as well as component dimensions.

4. Cap Identification Number
Includes the 8-digit cap drawing number and 4-digit cap component number. The 4 digit cap component number might be molded into the perimeter or the top of the air spring cap.

5. Piston Identification Number
Includes the 8-digit piston drawing number and the 4-digit piston component number. The 4 digit piston component number might be molded into the piston, aiding in identification.

6. Weight
The total weight of the spring assembly.

7. Piston Material
Aluminum, Steel, or Composite.

8. Applications
Includes all the information that is known about this specific application (i.e., model number, years of manufacture, part numbers, Firestone reference numbers, and competitor numbers, if known). If you know the vehicle your part came from, this is often the fastest way to identify the Firestone replacement part.

Firestone

AIR SPRING IDENTIFICATION

Cap Color 1
Identify the cap color to help you narrow down your selections. If no other information is available, visually refer to the part diagrams to identify your part.

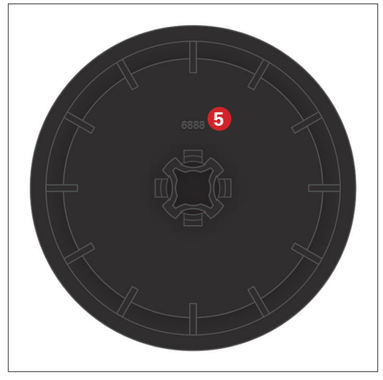
Assembly Order Number (AON) 2
The quickest way to identify the air spring is to read the manufacturer or Firestone assembly order number on the label adhered to the bead plate. Do not confuse this with the stamped 8-digit bead plate number.

Cap Identification Number 4
The 4 digit cap component number might be molded into the perimeter or the top of the air spring cap. Do not confuse this 4 digit code with the OE part number, which is also molded onto the perimeter or cap.

OE Part Number 8
The OE part number is stamped on the cap. Reference the Applications section of the part charts to match the OE part number and identify the Firestone AON.

Piston Identification Number 5
The 4 digit piston component number might be molded into the piston, aiding in identification.

BOTTOM VIEW



INDUSTRY-LEADING STEERING AXLE SUPPORT

ONLY FROM FIRESTONE

SAFE

Improved handling and stability of the truck/trailer unit via steering axle air suspension.

COMFORTABLE

Enhanced ride for truck driver as air springs absorb road and vehicle vibrations better than standard steel suspension.

EASY

Less maintenance, as air springs reduce overall wear and tear on the suspension and its components.

BELLOWS INDEX BY BELLOWS NUMBER

1T Bellows Number

1T15M6
or
1T15 Series
C013582149

1T spring shown

These tables include 1T and Convoluted bellows numbers.

For 1T Reversible style springs, locate the bellows number, typically molded directly underneath the Firestone logo. For styles with a **single 1T number**, such as 1T15M6 or 1T19L, use the chart below.

*For bellows with a 1T Series number, followed by a C01xxxxxxx number, use the **1T Bellows Index by C01 Bellows Number** table on page 210.*

Firestone

Firestone Industrial Products

TAKING DEPENDABILITY 100,000 MILES FURTHER

Introducing Firestone's new **INDUSTRY-BEST FIVE YEAR LIMITED WARRANTY**

We reviewed our warranty return rate history, and with rates below 0.02%, this warranty change will not increase distributor exposure for warranty return costs. We recognize the peace of mind our products bring to fleet owners and owner operators across North America, and our new warranty helps you continue to position the Firestone air spring line as the reliability the market needs.

AIR SPRING WARRANTY EVALUATION CRITERIA

Firestone air springs are designed to provide years and thousands of miles of trouble-free service. The durability of Firestone air springs is such that they will often outlast other maintenance items on your suspension, such as bushings, shocks, leveling valves, or regulators. Airide springs by Firestone are warranted to be free of material defects and/or workmanship for various periods of time, depending upon the application. Firestone Industrial Products Company offers a complete line of Airide springs, with replacement springs available for virtually every vehicular air suspension system. Since each individual air spring is closely examined and pressure tested at the factory, the vast majority of premature failures and consequent warranty returns are found not to be defective, but fail because of abuse caused by other problems associated with the suspension. Before you install a new air spring, you should carefully examine the old one to determine what caused it to fail. If it was due to a defect in the suspension system, then the new air spring may also fail unless you correct the problem. The information on the next two pages was developed to illustrate the types of failures that may occur, and to assist you in determining the cause and corrective action required.

When applied and maintained properly, Airide™ springs can provide thousands of miles of trouble-free service. Most failures are caused by a lack of suspension maintenance or improper application. This is a guide to common air spring failures that are **not covered by warranty.**

Firestone

MISALIGNMENT

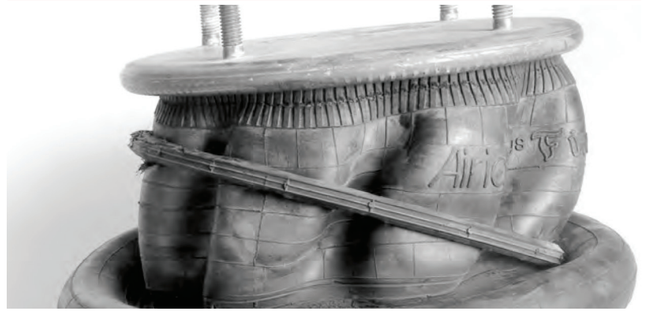
Appearance or Condition

- Off-center bumper contact
- Same as abrasion or bottoming out

Possible Causes

- Worn bushing
- Improper suspension

LOOSE GIRDLE HOOP



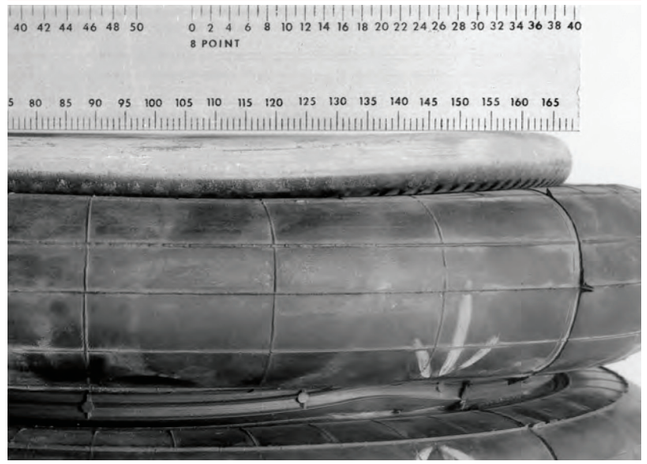
Appearance or Condition

- Rubber bellows distorted and girdle hoop torn loose

Possible Causes

- Running at extended positions with low air pressure

BOTTOMING OUT



Appearance or Condition

- Bead plate concave
- Internal bumper loose
- Hole in girdle hoop area (convoluted)
- Hole in bead plate junction area
- Leaking around blind nuts

Possible Causes

- Broken or defective shock absorber
- Defective leveling valve
- Overloaded vehicle
- Pressure regulator set too low
- Wrong air spring (too tall)

ABRASION

Appearance or Condition

- Hole rubbed into side of bellows
- Hole in bellows area that rolls over piston (reversible sleeve style)

Possible Causes

- Structural interference, such as:
  - -broken shock
  - -loose air line
  - -misalignment
  - -worn bushings
- No air pressure (reversible sleeve style)
- Foreign material (sand, rocks, etc.)
- Wrong air spring

CIRCUMFERENTIAL CUTS

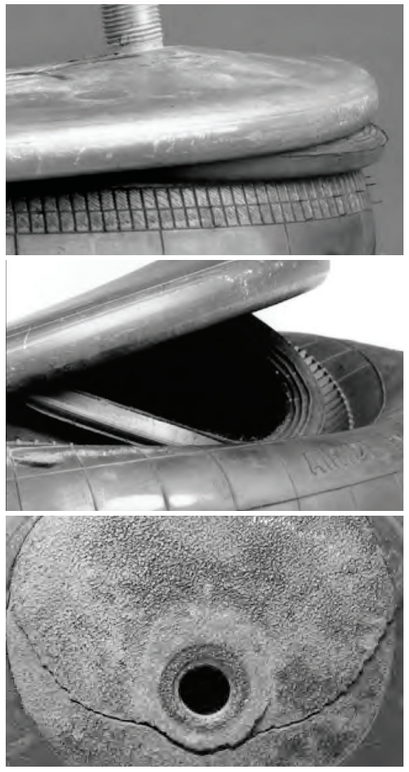
Appearance or Condition

- Bellows cut in circle at bead plate junction
- Bellows cut in circle at piston junction (reversible sleeve style)

Possible Causes

- High pressure, fully extended for long periods of time
- Impact in compressed position

OVEREXTENSION



Appearance or Condition

- Bead plate convex, especially around blind nuts or studs
- Rubber bellows separated from bead plate
- Leaking at blind nuts or studs
- Leaking at end closure (reversible sleeve)
- Loose girdle hoop on convoluted style

Possible Causes

- Broken or wrong shock absorber
- Defective leveling valve
- Ride position too high
- Defective upper stop (lift)
- Wrong air spring (too short)

Preventive Maintenance Checklist

Listed below are items that can be checked when the vehicle is in for periodic maintenance.
NEVER ATTEMPT TO SERVICE THE AIR SUSPENSION ON A TRUCK OR TRAILER WITH THE AIR SPRINGS INFLATED.

1 Inspect the O.D. of the air spring. Check for signs of irregular wear or heat cracking.

2 Inspect air lines to make sure contact doesn't exist between the air line and the O.D. of the air spring. Air lines can rub a hole in an air spring very quickly.

3 Check to see that there is sufficient clearance around the complete circumference of the air spring while at its maximum diameter.

4 Inspect the O.D. of the piston for buildup of foreign materials.

5 Correct ride height should be maintained. All vehicles with air springs have a specified ride height established by the O.E.M. manufacturer. This height, which is found in your service manual, should be maintained within 1/4". This dimension can be checked with the vehicle loaded or empty.

6 Leveling valves (or height control valves) play a large part in ensuring that the total air spring system works as required. Clean, inspect, and replace, if necessary.

7 Make sure you have the proper shock absorbers and check for leaking hydraulic oil and worn or broken end connectors. If a broken shock is found, replace it immediately. The shock absorber will normally limit the rebound of an air spring and keeps it from overextending.

8 Check the tightness of all mounting hardware (nuts and bolts). If loose, re-torque to the manufacturer's specifications. Do not over-tighten.

Cleaning

APPROVED: Approved cleaning media are soap and water, methyl alcohol, ethyl alcohol, and isopropyl alcohol.
NON-APPROVED: Non-approved cleaning media include all organic solvents, open flames, abrasives, and direct pressurized steam cleaning.

The total inspection process described on this page can be done in just a matter of minutes. If you find one of the above conditions exists, please take corrective action to ensure that it is fixed properly. This will save you both time and money over the long run.

BUILT FOR THE PROS

RIDE-RITE
AIR HELPER SPRINGS

THE FIRESTONE ADVANTAGE

Only Firestone delivers the benefits of global innovation to your driveway or fleet. Our Ride-Rite™ air helper springs are precision engineered to fit hundreds of vehicles, including most modern pickup trucks and SUVs. Maximize your vehicle's safe load-carrying capacity, stability, ride quality, and brake effectiveness with Ride-Rite air helper springs, only from Firestone.

+ MORE LEVEL LOADS
+ MORE COMFORTABLE RIDE
